

#### 4. Hospital Appointment Booking System – Healthcare UI

##### Scenario:

A hospital wants a mobile application that allows patients to search for doctors and book appointments online.

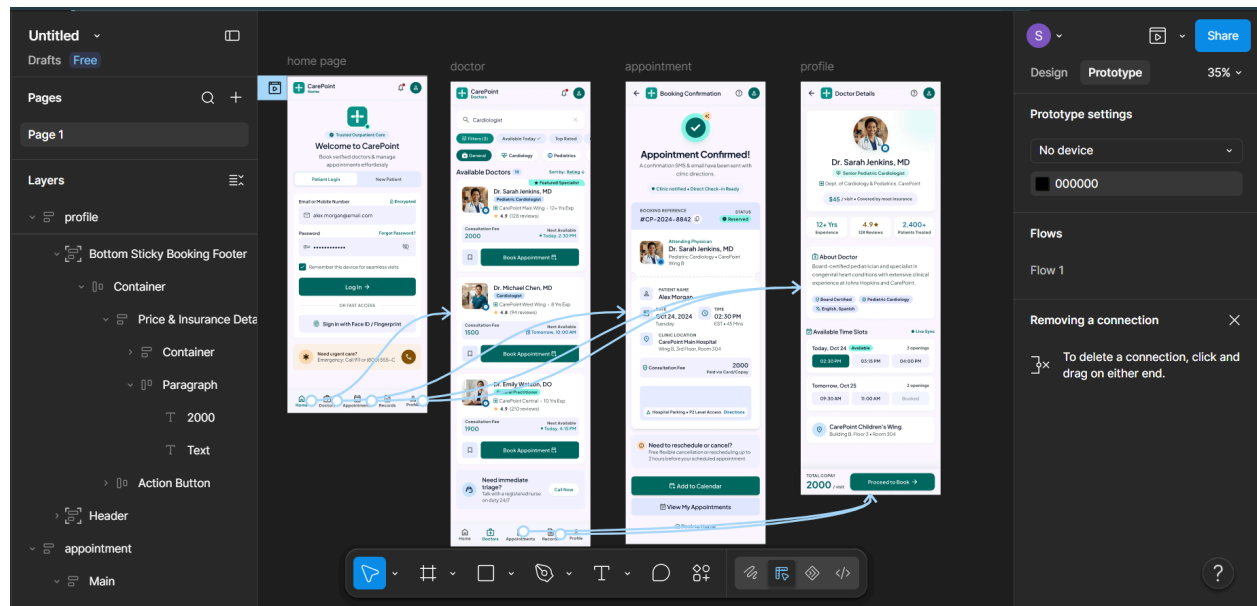

##### Question:

Using Figma, design a hospital appointment booking application with:

1. Welcome/Login Screen – Hospital logo, patient login fields, and Login button.
2. Doctor Search Screen – Search bar, medical specialties, doctor cards, and filters.
3. Doctor Profile Screen – Doctor photograph, name, specialization, experience, consultation fee, and available time slots.
4. Appointment Booking Screen – Selected doctor, date selection, available time slots, and Book Appointment button.
5. Confirmation Screen – Patient name, doctor name, appointment date, time, and appointment ID.

**Figma requirements:** Use Auto Layout, Components, consistent typography, icons, and Prototype interactions. The prototype should allow a user to navigate from doctor selection to appointment confirmation.
